Past performance does not guarantee future results. The performance data quoted represents past performance and current returns may be lower or higher. The investment return and principal will fluctuate so that an investor’s shares when redeemed may be worth more or less than the original cost. The Fund’s most recent month-end performance can be found at disciplinefunds.com. Returns for less than one year are not annualized.

Net asset value (“NAV”) returns are based on the dollar value of a single share of the ETF, calculated using the value of the underlying assets of the ETF minus its liabilities, divided by the number of shares outstanding. The NAV is typically calculated at 4:00PM EST on each business day the exchange is open for trading. Market returns are based on the trade price at which shares are bought and sold. Market performance does not represent the returns you would receive if you trade shares at other times. Total return reflects reinvestment of distributions on ex-date for NAV returns and payment date for Market Price Returns. The market price of the ETF’s shares may differ significantly from their NAV during periods of market volatility.

IMPORTANT DISCLOSURES

Past performance does not guarantee future results. The performance data quoted represents past performance and current returns may be lower or higher. The investment return and principal will fluctuate so that an investor’s shares when redeemed may be worth more or less than the original cost. The Fund’s most recent month-end performance can be found at disciplinefunds.com. Returns for less than one year are not annualized.

Investments involve risk. Principal loss is possible. The Discipline Fund ETF has the same risks as the underlying securities traded on the exchange throughout the day. Unlike mutual funds, ETFs may trade at a premium or discount to their net asset value. Investments in foreign securities involve political, economic, and currency risks, greater volatility and differences in accounting methods. These risks are magnified in emerging markets. The Discipline Fund is inherently “countercyclical” and may underperform its benchmark for long periods of time.

Frontier Markets Risk. Compared to foreign developed and emerging markets, investing in frontier markets may involve heightened volatility. Fund of Funds Risk. Because it invests primarily in other funds, the Fund’s investment performance largely depends on the investment performance of the selected underlying exchange-traded funds (ETFs). New Fund Risk. The Fund is a recently organized management investment company with limited operating history. There can be no assurance that the Fund will grow to or maintain an economically viable size.

The S&P Target Risk Moderate Index is designed to measure the performance of moderate stock-bond allocations to fixed income while seeking to increase opportunities for higher returns through equities.
